

Introduction

Are you interested in sourcing competitively priced and readily available replacement parts for tapchangers and switchgear? Eng-Com can help you.

Following several years as the Australian agent for Global Power UK Limited, who were a leading manufacturer of spares for On-Load Tapchangers and MV switchgear, Eng-Com is now an independent supplier of pattern parts, although we have retained links with former ATL/Global employees in the UK who now manufacture in their own right. We can supply replacement parts for a wide range of equipment including Fuller, Associated Tapchangers Ltd (ATL), Brush, English Electric, AEI and GEC to name but a few. Eng-Com is also the Australian distributor for genuine OEM parts from Ferranti Tapchangers Limited. We specialise in the supply of contact assemblies, especially those involving copper-tungsten, but can also supply many other moulded and fabricated components. Parts from obsolete equipment can be reverse engineered, using sophisticated metrology and metallurgical analysis, providing a pattern part is available

Many parts for common tapchangers and circuit breakers are held in stock in the UK, and can be delivered to Australian and New Zealand customers within 7 to 10 days, at very competitive prices. Representative stocks for the popular ATL AT, Fuller F, and Ferranti DS2 and ES3 tapchangers are held in Melbourne.

Have you ever been frustrated by the problems of trying to identify and source spare parts for older equipment? We may be able to help.

Global Power have developed an extensive series of drawings to assist customers in identification of pattern parts for a wide range of electrical equipment, both obsolete and in current production.

These drawings include MV Circuit Breakers such as the Reyrolle LMT, English Electric OLX, Brush VSI as well as Tapchangers from ATL/Fuller, AEI etc. Examples are included on our web site and others available on CD-Rom in Acrobat .pdf format. For Ferranti equipment we have maintenance parts manuals.

Eng-Com can also offer local on-site support and advice.

My background in the switchgear and transformer industry includes periods with Crompton Parkinson, British Electric Transformer, Hawker Siddeley Power Transformers, Brush, Wilson/Yorkshire Switchgear, Ampcontrol, Tyree and EDT. For ten years I was ATL's man in Australia. Along with access to a wide range of spares I would like to offer this experience to assist you in maintaining your tapchanger assets.
